ABOUT ME

Computer Science student who enjoys building practical applications and exploring open-source software. I create web-based tools for vocabulary learning, exam preparation, and productivity, continuously expanding my technical skills as I take each project from idea to working product.

SKILLS

Core & Tools: C++, Java, Python, Linux, Nix, Docker, Git

Languages: Vietnamese (Native), English (Upper-Intermediate)

PRODUCTS & PROJECTS

Vocaxis

2025

<https://vocaxis.com>

A web-based platform for English vocabulary learning featuring an AI-generated learner dictionary, multi-language translations, and FSRS-based spaced repetition.

- Developed a full StarDict-compatible dictionary, allowing users to load AI-generated entries into apps like Kindle and GoldenDict.
- Created a Plasmo-powered browser extension for instant, context-aware vocabulary capture from any webpage.
- Built with Next.js, Radix UI, and Supabase; deployed on Vercel with dictionary APIs served via Cloudflare Workers/D1.
- Publicly launched and reached 400 user signups organically.

Ngàn Lá

2025

<https://thangqt.com/projects/nganla>

A comprehensive online exam platform for Vietnamese high school students (Grades 10–12) with textbook mapping, analytics, and on-demand AI support.

- Implemented a performant Next.js frontend with a Go (Chi) backend and shadcn/ui interface.
- Built automated content crawlers for major education sites (Vietjack, Vừng Oï, ...).
- Added an LLM-powered admin assistant to generate compatible questions and accelerate exercise creation.

Spanboard

2025

<https://thangqt.com/projects/spanboard>

A time-journaling app for documenting high-resolution daily activity spans, from sleep to routines to task sessions.

- Designed an accessibility-focused interface using Shim UI (Adobe React Aria) and Next.js.
- Implemented Pomodoro-based focus sessions with persistent storage via Supabase.
- Built custom utilities for structured daily and weekly time tracking.

MindForm

2024

<https://thangqt.com/projects/mindform>

A document generation tool that converts natural language or scanned images into editable, print-ready PDFs.

- Used LLMs (Gemini family) to transform unstructured content into structured HTML templates.
- Built a FastAPI backend with WeasyPrint for high-fidelity PDF rendering.
- Implemented an editable Next.js/Radix UI frontend for refining documents before export.

EDUCATION

VNU University of Engineering and Technology, Hanoi

2023 - 2027

Computer Science
