## ABOUT ME

---

Computer Science student who learns by building and breaking things. Comfortable working in Linux and across the full web stack, with a focus on clean architecture, testing, and thoughtful tool selection.

## SKILLS

---

**Languages:** C++, Java, Python, JavaScript, TypeScript, Go

**Frameworks & Data:** React, Next.js, NestJS, Vite, PostgreSQL, Supabase

**Tools & Platforms:** Linux, Docker, Git, Nix, Cloudflare Workers

**Spoken Languages:** Vietnamese (Native), English (Upper-Intermediate)

## EXPERIENCE

---

Full Stack Intern

Hanoi

BAP IT Co., JSC

Feb 2026 - Present

- Defined the initial API specification, database schema, and AGENTS.md development conventions, then scaffolded the project foundation with Docker Compose, tooling, and GitHub Actions CI.
- Built the staff dashboard, JWT authentication with RBAC, candidate invite lifecycle with link revocation, and question bank/session management workflows.
- Integrated a self-hosted Judge0 sandbox for multi-language code execution and prototyped real-time collaboration using Yjs and WebSocket.
- Set up testing infrastructure across the stack with Jest and Playwright, and built a Codeforces Parquet importer to bulk-seed the question bank.

## PRODUCTS & PROJECTS

---

Vocaxis

2025

vocaxis.com — Web platform for English vocabulary learning with AI-generated entries, multi-language translations, and FSRS spaced repetition.

- Built a StarDict-compatible dictionary loadable into Kindle and GoldenDict, served via Cloudflare Workers/D1.
- Created a Plasmio browser extension for context-aware vocabulary capture from any webpage.
- Publicly launched on Next.js/Supabase and reached 400 user signups organically.

Ngàn Lá

2025

thangqt.com/projects/nganla — Online exam platform for Vietnamese high school students with textbook mapping and analytics.

- Built with Next.js, Go (Chi) backend, and shadcn/ui; structured content by grade, subject, and textbook chapter.
- Developed automated content crawlers and an LLM-powered assistant to generate and bulk-import exam questions.

Spanboard

2025

thangqt.com/projects/spanboard — Time-journaling app for documenting high-resolution daily activity spans.

- Designed an accessibility-focused interface using React Aria and Next.js.
- Implemented Pomodoro-based focus sessions with persistent storage via Supabase.

## EDUCATION

---

VNU University of Engineering and Technology, Hanoi

2023 - 2027

Computer Science
